---

Spray applicator for **BIORESTOR® Asphalt Rejuvenator** includes everything to begin preserving your construction asphalt yourself!

### Computerized Compact Construction Joint Spray System

Spray systems are powered by reliable Honda engines equipped with electric start. Mated to the Honda engines are ACE centrifugal pumps supplying on-demand pressure to the system. The electric start and battery used for the spray system supply 12v power to either model of sprayer- keeping these systems from needing to be hardwired to the unit. This allows for quick installation and removal of the units not removing a needed fleet vehicle from commission. Control cables ran to the cab can also easily be more permanently mounted if the spray system is going to be used for an extended amount of time but are temporarily strung along and ran into a window of the spraying vehicle.

Included in **ALL** kits are 1 ½ " hoses for hooking up the tote to the spray system, stainless steel mixer to agitate/mix concentrate and dilute product, (2) tote connectors with caps, white tips for 0.03 rate on construction joints/rumble strips, transfer hose, extra pump seal kit, tote return lid, and some additional ware part/pieces.

### Computerized Compact Construction Joint Spray System

---

- Spray Kit specifically designed for a pick-up truck application 2 foot wide directly to construction joints or rumble strips.
- This system is mounted on an aluminum base with a full cage around it with durability in mind.
- Computerized system uses the same raven 450 control valve as the Computerized Truck Mounted Spray System with only one bank valve.
- One tote of BIORESTOR at its suggested 0.03 rate on construction joints and rumble strips allows for approx. 7.5 continuous mile of treatment before refilling.
